ABSTRACT

This invention presents methods and systems for migrating an applicant's existing master template into a replacement master template. More specifically, it generates a compatibility template from a live image if a live template does not correspond to an applicant's existing

5   master template according to predefined criteria, whereby a replacement master template is generated from the live image, and stored, if the compatibility template corresponds to the applicant's existing master template according to predefined criteria. Thus, the inventive arrangements accommodate dynamic changes in master templates.
